Education

Bachelor of Computer Engineering — Sep. 2023 – May. 2028
Simon Fraser University — *Burnaby, BC*

Experience

Cybersecurity Consultant Intern - Security Architecture — May 2026 – Aug. 2026
Ernst & Young (EY) — *Vancouver, BC*

- Engineered identity-security improvements for a financial client's Active Directory environment, reducing attack surface by 30% through remediation of 40+ privilege-escalation paths, security-group restructuring, PAM, and least-privilege controls
- Performed security architecture and risk analysis for deployment of GitHub Copilot across 1,500+ users, identifying 18 security and privacy risks and defining 12 technical and governance controls
- Developed incident-response procedures and conducted 3 ransomware simulations for an energy-sector environment, analyzing 20+ cyber and operational risks and building a six-phase response playbook

Cybersecurity Research Assistant – Threat Intelligence — Jan. 2026 – May 2026
Simon Fraser University — *Burnaby, BC*

- Built a Threat Knowledge Graph in Neo4j and developed queries to visualize relationships between domains, IPs, indicators, and attacker infrastructure
- Engineered a MITRE ATTCK-grounded RAG pipeline with IOC and GNN confidence-aware re-ranking to retrieve TTP;s and generate evidence-backed APT attribution

Technical Account Manager Intern — Jun. 2025 – Sep. 2025
CrowdStrike — *Remote*

- Supported customer security-posture assessments by analyzing security telemetry, investigating platform findings, and identifying opportunities to improve security monitoring
- Utilized Falcon Insight, Falcon Next-Gen SIEM, Falcon Cloud Security, and Falcon Identity Protection to support threat detection, log analysis, and automated security monitoring

IT Admin / Network Security Intern — Jan. 2025 – May 2025
Glentel Inc. — *Burnaby, BC*

- Hardened Windows and Active Directory environments through GPOs, least-privilege access controls, OU restructuring, account-policy enforcement, and privileged-group reviews
- Configured and secured firewalls, VLANs, DHCP, DNS, and network segmentation across distributed retail infrastructure

Projects

Jev SentinelForge – AI-Powered SOC Alert Triage & Threat Classification

- Engineered an AI-assisted SOC alert triage platform using TypeSafe AI's Jev model to classify Windows/Sysmon security events, score threat severity, and probabilistically route high-risk or uncertain alerts for deeper LLM investigation
- Built a telemetry analysis pipeline for Sysmon Event IDs 1 and 3, PowerShell activity, LSASS access, PsExec, and scheduled tasks, mapping suspicious behaviors to MITRE ATT&CK tactics and techniques

Honors & Awards

Future Leader in Cybersecurity Scholar | *FS-ISAC*
Fortinet Award in Cybersecurity | *SFU*

Certifications

CrowdStrike Falcon Administrator | *FALCON 200*
CrowdStrike Falcon Cloud Security | *CLOUD 100*

Technical Skills

Security Engineering: Threat Hunting, Incident Response, Security Architecture, Endpoint Security, Vulnerability
Security Tools: CrowdStrike Falcon, Splunk, Burp Suite, Wireshark, Nmap, Metasploit, SonicWall
Systems & Networking: Windows, Linux/Unix, Active Directory, GPOs, DNS, DHCP, TCP/IP, VLANs, Firewalls
Programming & Automation: Python, C, C++, Java, PowerShell, Bash, SQL
